DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

1. Claims 1-15 and 19-24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "...and at least one gas consisting essentially of..."

It appears the applicant is creating a Markush group. For examination purposes the claim is taken to read "...and at least one gas selected from the group consisting of..."

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-15 and 19-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Jones et al. US 6,953,544.

Regarding claim 1, Jones (544) teaches a method of making a filter media comprising a web of thermoplastic fibers modified by gaseous plasma at atmospheric

Art Unit: 1723

pressure wherein the gaseous plasma is air and the gas helium, argon or nitrogen (col. 4, line 58 – col. 5, line15).

Regarding claims 2-15 and 19-24, Jones (544) teaches the thermoplastic fibers are electrostatically charged; the charge is by a corona discharge method (col. 5, lines 24-25); the gaseous plasma is a He/air or an Ar/air mixture (co. 5, lines 13-15); the fibers are made from polypropylene, polycarbonates, polyesters and combinations thereof (col. 4, lines 20-24); the web is a fibrous layer of melt extruded fibers, staple fibers and combinations thereof (col. 4, lines 11-19).
